ARMOR

WALLACE
PERIMETER SECURITY

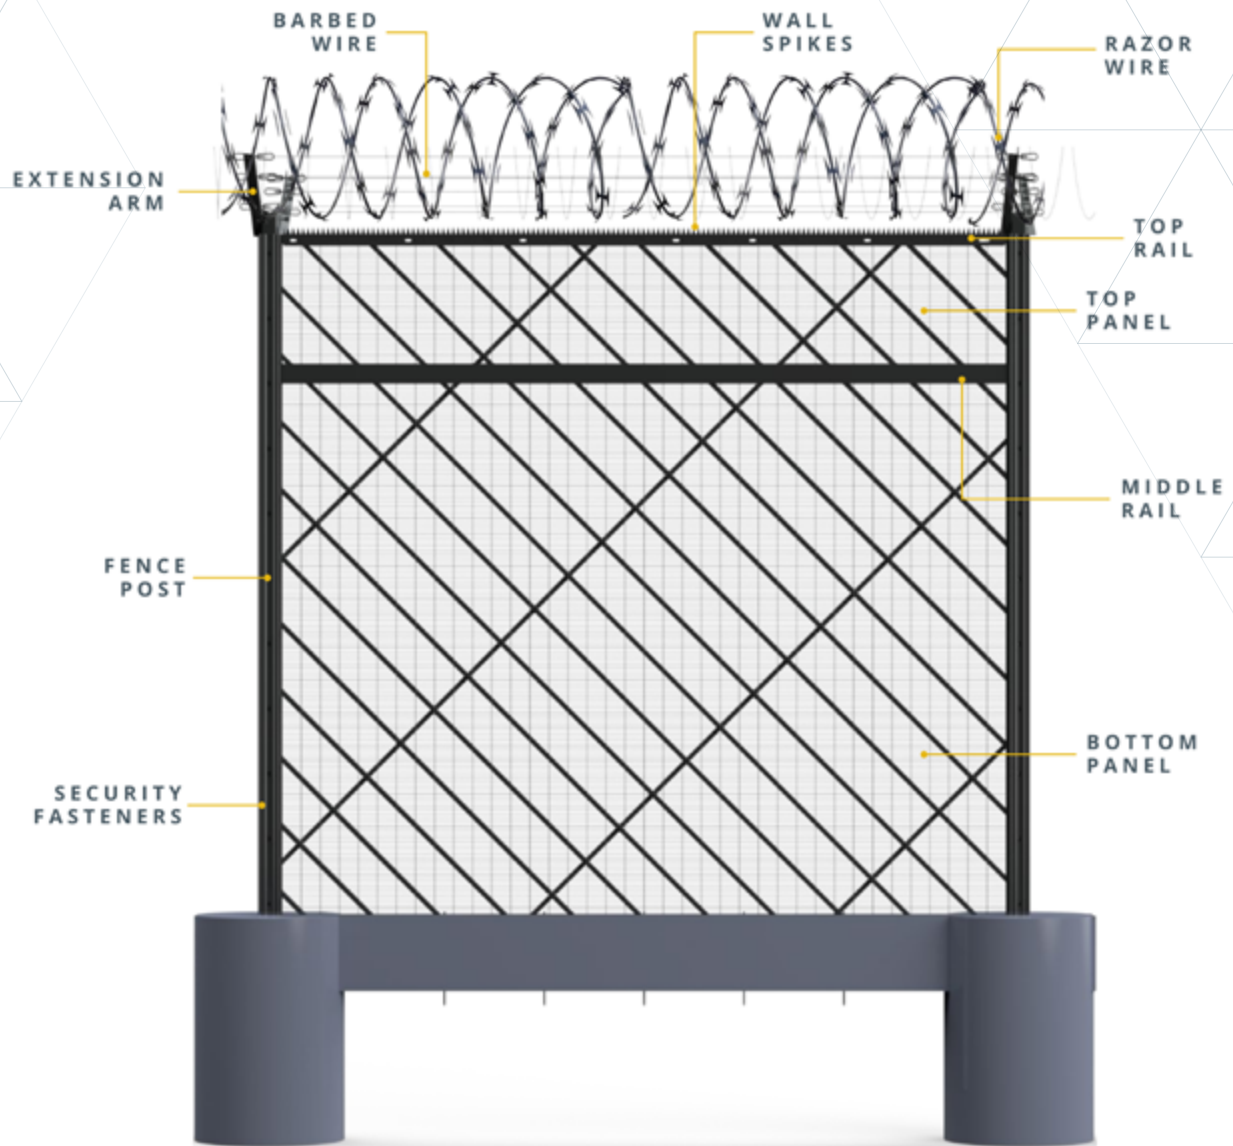

ENGINEERED FOR CRITICAL SITES PROVEN IN REAL-WORLD ATTACKS

Rampart Armor is built for the highest security sites where failure is not an option. Certified to **ASTM F2781-15**, it **withstands aggressive power tool attacks for over six minutes and medium tool attacks for over thirty minutes.** This critical delay gives security forces the time they need to respond.

Reinforced steel tubes and anti-climb welded wire mesh resist cutting, climbing, and prying, while a **41.33% visibility index** keeps sightlines clear for cameras and patrols. A dual-layer finish of hot-dip galvanizing and powder coating ensures long-term durability in harsh conditions.
